

Healthcare-associated infections (HAIs) are a global threat to patient safety and healthcare systems.

- **7 out of every 100 patients** acquire a HAI during their hospital stay
- HAIs cause over **7 million deaths per year**
- HAIs cost **billions of euros per year**

High tech solutions to combat the invisible threat of HAI's

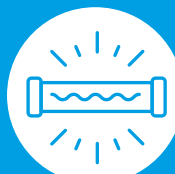

Cleaning robots and autonomous vehicles

Reduce repetitive tasks freeing up staff for more complex work, disinfect high-touch surfaces, and minimise human exposure to pathogens.

2

UVC light and hydrogen peroxide vapor can effectively kill bacteria and viruses lurking on surfaces.

Automated room disinfection

AI-powered cleaning protocols

Optimise cleaning routines, identify high-risk areas, and ensure thorough disinfection across the entire environment.

3

Track staff movements, monitor adherence to cleaning protocols, and provide real-time data to improve efficiency and quality control.

Wearable tech for staff

Discover all these innovations and more at the **Healthcare Cleaning Forum** on **16 May 2024** at **Interclean Amsterdam 2024!** The HCF raises awareness, shares best practices and the latest research, and offers cutting edge infection prevent solutions.
